

# Foam Rockets

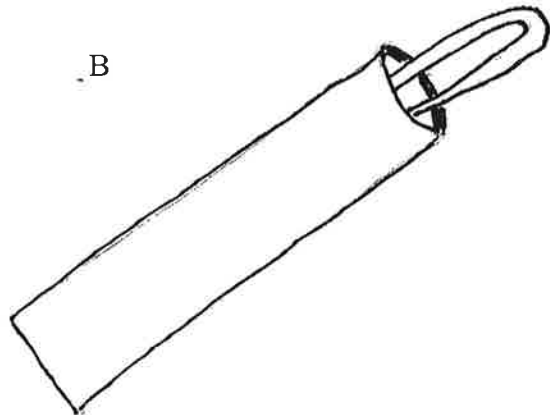

## Instructions:

1. Thread the rubber band through one of the zip ties. Slip the tie partially closed, leaving a circle opening about the size of a dime. (A)
2. Insert the zip tie into the foam with about 2 inches of the rubber band sticking out. (B)
3. Wrap the second zip tie around the foam tube about one inch below the end that has the rubber band sticking out. Zip it closed as tightly as possible. (C)
4. Cut 3 rocket fins from the colored piece of foam.
5. Starting about 1 inch above the bottom edge of the foam tube, cut 3 slits for slipping in the rocket fins. DO NOT CUT THROUGH THE BOTTOM EDGE OF THE FOAM TUBE. (D)
6. Slip the fins into the foam tube. If desired, they may be glued into place for a more permanent placement.
7. To launch, catch the rubber band with one thumb and pull back on the body of the rocket with the other hand then "flip" it.
