

Name \_\_\_\_\_

**Distances of the Stars of Orion in Light Years**  
**Away From Earth Worksheet**

Directions:

Look at the graph of The Number of Light Years Each Star is Away From Earth. Going from left to right, start from the least distanced star to the farthest distanced star and write in the spaces below how many light years each star is away from the earth. Use round numbers.

| <b>Star Number</b> | <b>Approximate Star Distance</b> |
|--------------------|----------------------------------|
| 1                  | 250 light years                  |
| 2                  |                                  |
| 3                  |                                  |
| 4                  |                                  |
| 5                  |                                  |
| 6                  |                                  |
| 7                  |                                  |
| 8                  |                                  |
