

Lesson Fifteen—Research

Objective 1 Observe and summarize information about microorganisms.

Objective 2 Demonstrate the skills needed to plan and conduct an experiment to determine a microorganism's requirements in a specific environment.

Objective 3 Identify positive and negative effects of microorganisms and how science has developed positive use and some microorganisms and overcome the negative effects of others.

1. The students can to reports with drawings on the different microorganisms.
2. The students can do reports on inventions that have been discovered on how to control diseases.
3. The students can do reports on how different types of foods are made by microorganisms.
4. The students can do reports on the microorganisms that are in our bodies to help us out.
5. The students can do reports of diseases that are caused by microorganisms.
6. The students can do reports decomposers.
7. Students can do a report on a microorganism experiment.
8. Students can do their own microorganism experiment.
9. Write a story about a day of the life of a microorganism.
