NAME				

Lay thermometers on some things that turn off and on in your classroom. Write their names in the first row where it says "Device". Leave them there for 5 minutes while the machines are off. Write the temperatures in the "off" row. Put the thermometers back on the machines and leave them for at least 10 minutes. Go back and read them and write the new temperatures in the "on" row. Draw a bar graph under the table to show each temperature. Write what you learned.
