

## JSD 3D Learning Activity Template

**Grade:** 6th

**Title:** Drawing Molecules

**Utah Science with Engineering Education Standard (SEEd):** Develop models to show that molecules are made up of different kinds, proportions, and quantities of atoms.

**Key crosscutting concept(s) (CCC):** Structure and function and Scale, proportion, and quantity

**Key science and engineering practice(s) (SEP):** Developing and using models and Obtaining, evaluating, and communicating information.

**Materials:** Paper, pencil, markers, colored pencils, crayons, a copy of atoms, one laptop per group.

**Time: 2 days:** Day 1 - 1 hour, day 2 – 45 minutes

**Teacher background, key content information and hints:** Understand that molecules are made of different proportions and quantities of atoms. List of different molecules that students can develop models of based on the list of atoms provided.

**Prior knowledge that students need:** Molecules are made of different combinations of atoms with certain combinations of atoms forming specific molecules.

### Learning Activity Plan

***These three aspects of a lesson should be identified in your learning activity.***

**Gathering:** *(Obtain Information, Ask Questions/Define Problems, Plan & Carry Out Investigations, Use Models to Gather Data and Information, Use Mathematics/Computational Thinking.)*

**Reasoning:** *(Evaluate Information, Analyze Data, Use Mathematics/Computational Thinking, Construct Explanations/Solve Problems, Develop Arguments from Evidence, Use Models to Predict & Develop Evidence.)*

**Communicating:** *(Communicate Information, Argue from Evidence (written & oral), Use Models to Communicate).*

**Phenomenon:** Atoms are combined in different proportions and quantities to form molecules.

**Learning Activity: Day 1:** Review atoms using the Periodic Table of Elements. Explain that atoms in different proportions and quantities make up molecules. Model a simple molecule – water H<sub>2</sub>O and explain that it is made up of 2 hydrogen and 1 oxygen atom. Give **each** group a list of common atoms (see student worksheet) and a list of common molecules without the formula. Students need to make a key for each atom – they choose a color for each different atom. The groups must research the formula for 10 different molecules. They can choose 10 from the list or research molecules from the following site [http://www.periodni.com/solcalc-chemical\\_compounds.html](http://www.periodni.com/solcalc-chemical_compounds.html). If they choose molecules that contain atoms that are not listed on the student worksheet, they need to add the atom and color code that as well. **Day 2: Groups will share their molecules with the class.**

**Materials for Each Group:** Paper, pencil, markers, colored pencils, crayons, a copy of atoms, one laptop per group.

**Procedure:** Review atoms with the class and introduce molecules using simple molecules such as water (H<sub>2</sub>O). Groups draw a model for 10 molecules using the color code they make for each atom. Each group will share their 10 molecules with the class and explain the atoms and quantities that make up each molecule.

**Assessment of student learning**

Teacher will informally assess each group as they work making sure all student are participating. Each group will be assessed on the student worksheet – color code for atoms and correctly modeling 10 molecules.

**Atoms**

Hydrogen	H
Oxygen	O
Nitrogen	N
Carbon	C
Sodium	Na
Chlorine	Cl

**Color****Atoms**

Magnesium	Mg
Sulfur	S
Copper	Cu
Lithium	Li
Fluorine	F
Calcium	Ca

**Color****Molecules**

Water	Ammonia	Ammonium Ion
Carbon Dioxide	Methane Gas	Nitrogen Gas
Propane	Butane	Nitrate
Nitrate Ion	Sucrose	Peroxide
Caffeine	Aspirin	Carbon Monoxide
Magnesium Chloride	Copper Oxide	Sulfuric Acid
Baking Soda	Lithium Chloride	Fluoride
Sodium Chloride (salt)	Hydrochloric Acid	Sodium Hydroxide
Sodium Cyanide	Calcium Cyanide	Elemental Chlorine
Hydrogen Chloride	Carbon Monoxide	Chlorine Gas
Ozone	Sulfur Dioxide	Carbon Tetrachloride
Sulfate Ion	Hydrogen Peroxide	Nitrogen Monoxide
Nitrogen Dioxide
